

# MASTER SET

## Index

### A

- Activities of daily living  
activity types, 74-75  
assistance, 6  
caregiver stress, 355  
patient institutionalization, 224  
risk factor, 204  
role captivity and, 92  
role overload and, 129, 143
- Adaptation, caregiver  
Alzheimer's patients, 1  
bereavement, 269-270  
loss of intimate exchange, 278  
patient institutionalization, 261  
case study, 13, 25-26  
characteristics, 2-3, 25  
chronic stressors, 11  
communication interventions, 316  
definition, 30  
dementia care, case study, 27-28  
effect on clinical interventions, 308  
emotional stress levels, 4  
examples  
Constance, 25-26, 45, 99, 170, 200-201, 246-247, 335-336  
Frank, 13, 51, 135, 224, 263, 280, 325  
Rosemary, 27-28, 73, 141-142, 162, 192, 258, 302-303, 312-313  
Valerie, 66, 116, 340  
grief reactions, 30  
despondency, 291-292  
yearning, 291  
in-home care, costs, 6  
institutionalization  
effect on secondary role strains, 238-241  
emotional well-being, 242-244  
successful, criteria, 236-238, 352  
mastery, 296-297, 301  
nursing home placement, 192-194  
adaptation differences, 236-238  
common problems, 322-323  
patient death, 353  
immediate impact, 272-276  
long-term impact, 295-298  
psychological effects, 7  
readjustment period, 30-31  
role disengagement, 323-325  
self-concept erosion, loss of self, 93, 98, 136  
social support, 361-362
- Adult children  
effect of patient institutionalization, 240  
financial obligations, 331  
informal support, 160  
spouses and  
bereavement differences, 302  
care obligation differences, 340, 362
- Alzheimer's disease  
caregiving, 1  
characteristics, 8  
dementia and, relationship, 8  
increases in death, 253  
potential causes, 8
- Alzheimer's Disease and Related Disorders Association, Congressional lobbying, 337
- American Association for Retired Persons, caregiver needs, 337
- Anger  
bereavement period, 276  
kin relationship and, 284  
patient death, long-term impact on caregiver, 297-298
- Anticipatory stress, institutionalization stressor, 207, 210-212
- Assisted living facilities, dementia patients, 321

**B**

- Behavior, problematic
  - caregiver stress, 355
  - common types, 74
  - definition, 72
  - example, 73
  - nursing home placement risk, 191-192
  - psychosocial resources and, 160
  - role captivity and, 127, 143, 163-164
  - role overload and, 143, 281
- Behavioral management techniques
  - family support, 316
  - primary stressors, 315-316
- Bereavement
  - buffering factors, 270-271
  - caregiver adaptation, 269-270, 323-325
  - grief and, comparison, 286-287
  - impact of time, 279-281
  - loss of intimate exchange, 278
  - patient death
    - cohort studies, 273
    - long-term impact on caregiver, 295-298
  - patient institutionalization, 261
- Buffering effects, 158

**C**

- California Resource Centers, caregiver support, 337, 341
- Canonical correlations
  - data analysis technique, 61-62
  - objective and subjective primary stressors, 81-83
  - primary and secondary stressors, 90-92
  - secondary stressors and intrapsychic strains, 96-98
- Care
  - duration
    - care-related stress, 129
    - measurement methods, 67
  - in-home, *see* In-home care
- Career, caregiving, *see* Caregiving career
- Caregivers
  - adaptation, *see* Adaptation, caregiver
  - Alzheimer's patients, 1
  - bereavement
    - institutionalization effects, 261
    - loss of intimate exchange effects, 278
  - case study, 13, 25-26
  - characteristics, 2-3, 25
  - communication interventions, 316
  - dementia care, case study, 27-28
  - emotional stress levels, 4
  - examples
    - Constance, 25-26, 45, 99, 170, 200-201, 246-247, 335-336
    - Frank, 13, 51, 135, 224, 263, 280, 325
    - Rosemary, 27-28, 73, 141-142, 162, 192, 258, 302-303, 312-313
    - Valerie, 66, 116, 340
  - grief reactions
    - definition, 30
    - despondency, 291-292
    - yearning, 291
  - patient death
    - immediate impact, 192-194
    - long-term impact, 295-298
  - psychological effects, 7
  - readjustment period, 30-31
  - self-concept erosion, loss of self, 93, 98, 136
- Caregiving
  - career, *see* Caregiving career
  - comprehensive, definition, 29
  - costs, 334-335
  - daily life adjustments, 37-38
  - dementia, 10
  - empirical inquiry, *see* Caregiving, empirical inquiry
  - extrinsic stressors, 98-100
  - family, 330
  - foreshortened, 29
  - gender preferences, 22, 49
  - in-home care, 51
    - anticipatory stress, 207, 210-212
    - costs, 6
    - gender and generation effects, 188
    - institutionalization care and, cost comparison, 334
    - instrumental assistance, 157-158
    - normal duration, 185-186
    - nursing home admission rates, 186
    - risks, 331, 344-345
    - stages, 28-29
  - intervention strategies, 306-308
  - intrapsychic strains, secondary
    - absence of gains, 93-94
    - guilt, 233, 236, 275-276, 280, 282-283, 296-297, 320
    - lack of caregiver competence, 93-94, 132
    - loss of self, 93, 136
    - primary stressor impact, 132-136
    - secondary role strains and, relationship, 96-98
  - onset of, 66-69
  - patient death
    - immediate impact, 285-286
    - long-term impact, 295-298

- patient institutionalization
    - anticipatory stress, 207, 210–212
    - catalysts, 199–201, 204–205
    - continuity and change in role, 222–224
    - impact on caregiver, 229–230
    - new stress sources, 224–229
    - transitional stress, 212–215
  - primary stressors, objective
    - activities of daily life dependency, 74–75
    - cognitive impairment, 71–72, 139
    - definition, 69–70
    - impact on intrapsychic strains, 132–136
    - patient resistance, 74
    - problematic behavior, 72–74
    - subjective stressors and, relationship, 81–83
  - primary stressors, subjective
    - definition, 77, 79
    - institutionalization effects, 230–232
    - loss of intimate exchange, 80–81
    - objective stressors and, relationship, 81–83
    - role captivity, 80
    - role overload, 80
  - psychological distress, institutionalization effects, 234–235
  - psychosocial resources
    - patient institutionalization effects, 233–234
    - social support, 152–154
  - public policies
    - determining need, 336–337
    - future directions, 337–341
  - role acquisition
    - causes, 350–351
    - clinical interventions, 312–314
    - definition, 23
    - intervention strategies, 306
    - public policy recognition, 338
    - stage in caregiving career, 23–28
    - transitional steps, 68
  - role disengagement
    - bereavement, 29–30
    - caregiver adaptation, 323–325, 353
    - definition, 23
    - grief period, 286–290
    - intervention strategies, 306, 308
    - loss of intimate exchange, 301
    - readjustment, 30–31
  - role enactment
    - clinical interventions, 314–315
    - definition, 23
    - intervention strategies, 306
  - phases, 28–29
  - principles, 351–352
  - secondary role strains
    - creation, 83–85
    - family conflict, 85–86
    - financial difficulties, 88–89
    - independence of, 89–90
    - institutionalization effects, 232–233
    - intervention programs, 38
    - intrapsychic strains and, 96–98
    - nursing home placement, 194–195, 238–241
    - primary stressors and, 90–92
    - psychosocial resources and, 165–166
    - strategies for alleviating, 317–318
    - work conflict, 87–88
  - social context, 100–105
  - stress containment, 4
  - stress process, 33–35
    - continuities and discontinuities, 271–272
    - long-term effects of institutionalization, 245–248
  - stress proliferation
    - causes, 37
    - cognitive impairment effects, 127, 139
    - coping differences, 38
    - definition, 4, 123
    - long-term course, 140–146
    - primary and secondary stressors, 35–36
    - short-term course, 126–139
    - structural and interpersonal foundations, 124–126
  - subjective reactions
    - definition, 77
    - types, 80–81
  - sustained, definition, 28–29
  - theatrical drama and, comparison, 3
  - withdrawal from, definition, 29
- Caregiving, empirical inquiry
- caregivers and their relatives
    - sample selection, 42–43
    - socioeconomic and demographic characteristics, 44–50
  - data analysis strategies
    - canonical correlations, 61–62
    - hazard models, 59–61
  - fieldwork implementation, 42–43
  - interview schedules, 51–55
  - loss-to-follow-up percentages, 47–48
  - measurement strategy
    - developmental stage, 55–56
    - key measures, 56–59
  - theoretical framework, 41–42
  - transitions in dementia patient, 50–51
